

# PRESSURE REGULATORS

Pressure regulators are recommended for all drip irrigation systems. If no pressure regulators are used high pressure surges or high pressure operation can cause damage to drip tape. Regulators should be installed close to the field being irrigated. The regulators have springs to maintain a constant pressure, these springs can be changed to change the pressure. **Note;** Flow rate on all regulators must be matched to your drip irrigation system or field size. These pressure regulators are flow activated, water must be flowing through to make them work.

## 2 1/2" Liquid Filled Gauge

Gauges filled with liquid provide effective dampening of most pulsation and vibration, and provide lubrication of all moving part; these gauges require no dampening device.
