

RAIN-FLO MIXAMATIC FERTILIZER INJECTORS

THIS FERTILIZER INJECTOR WORKS AUTOMATICALLY FROM MAIN LINE PRESSURE, VERY LOW PRESSURE LOSS, 1 TO 3 PSI.

HERE IS HOW IT WORKS; By closing gate valve partly on main line, it causes a pressure differential. The 1/4" tube on the high pressure side of the valve leads through a flow meter and into the top of the fertilizer tank. Fertilizer being heavier than water, is forced out the bottom of the tank and into the field side of the valve. Flow rates are adjusted by regulating the valve and reading the flow meter. Extra long flow tubes with valves, allows for emptying water from tank before refilling.

An inexpensive injector that works very well. **INCLUDES;** Tank, convenient flow meter, back flow check valve, pressure gauge, and skid. Assembled, ready to go. Can be shipped UPS.

MAZZIE FERTILIZER INJECTOR

NOTE! Greenhouse growers use dosatron injectors.

Price includes check valve

NOTE!!
FLOW MUST EXCEED
MINIMUM MAZZIE FLOW
RATE!!

The mazzie injectors are simple to operate, work on water power, no moving parts, inexpensive and reliable. However, they require a drop in pressure and flow of 20%. In many cases this is not a problem and for those situations they are a fine piece of equipment.
