

GROWING INDUSTRIAL HEMP FOR CBD & CBG OIL

- * **What Is Hemp?** Hemp is a member of the Cannabis Sativa family with less than .3 % THC (the psychoactive ingredient that creates a high).
- * **What Is Hemp Grown For?** Primarily for CBD & CBG oil, fiber and seeds.
- * **How Is Hemp Grown?** The ideal method for high CBD yield is transplanting small plants into raised beds with plastic mulch and driptape.
- * **How Is Hemp Harvested?** It can be harvested by hand, tractor 3-pt attachment, or combine with a specialized head.
- * **Drying After Harvest?** The complete plants can be hang dried or, leaves and flower are separated from the stalk and machine dried.
- * **Requirements For Growing?** First a state or USDA issued permit is required. Next establish a plan and acquire contacts to assist with growing, drying, and final oil extraction.
- * **Feminized Seed?** Unpollinated female plants produce the most CBD oil. Select a reputable seed supplier that can provide 99.9% feminized seeds.
- * **Can Male Hemp Plants Change Females To Marijuana?** No. If male plants are not removed they pollinate the female plants and create seeds thereby reducing CBD yield.
