

PRESSURE REGULATORS

Pressure regulators are recommended for all drip irrigation systems. If no pressure regulators are used, high pressure surges or high pressure operations can cause damage to drip tape. Regulators should be installed close to the field being irrigated. The regulators have springs to maintain a constant pressure, these springs can be changed to change the pressure. NOTE; Flow rate on all regulators must be matched to your drip irrigation system or field size. These pressure regulators are flow activated, water must be flowing through to make them work.
