To Our Customers;

Rain-Flo is a manufacturer of vegetable growing equipment and carries a full line of pumps and irrigation supplies (specializing mostly in drip irrigation). With over 40 years of experience in drip, we now have working systems through out North America.

Rain-Flo designed this catalog with our customers in mind; field layouts, charts, performance curves, and specifications, etc. We also provide free technical information over the phone and enjoy helping our customers grow lush, healthy crops while conserving water.

Rain-Flo is constantly updating and modifying their equipment. We enjoy engineering and listening to our customers comments. We again look forward to a successful year in serving our customers.

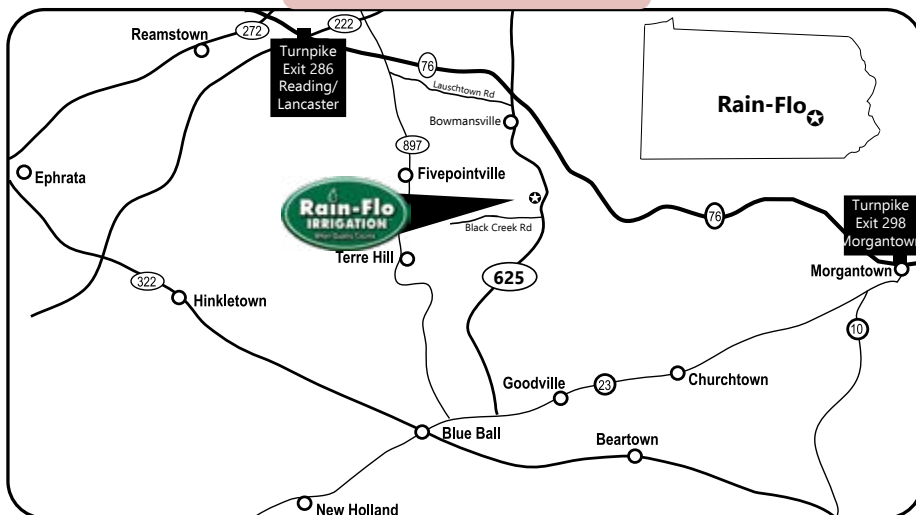

If you are receiving duplicate copies or if our catalog is no longer of interest to you, please contact us and let us know. If your address has changed or will change in the coming year, please give us the correct address. This will save us time and cost.

Thank you!

PLASTIC MULCH FILM

GREEN EMBOSSED

This has been specifically engineered to suppress weed growth like black mulch while warming the soil almost as much as clear plastic. Recommended for early spring crops.

PART#	SIZE	MIL	WT.	PRICE	10+
GR440	4' x 4,000'	1	80	\$ 155.00	\$ 153.00

CLEAR EMBOSSED

Clear plastic can be used with wire hoops to cover row crops, like the perforated plastic.

Note: When using drip irrigation with clear plastic, the drip line needs to be buried. Magnifying water droplets may burn holes into the drip line.

RIVULIS T-TAPE DRIP TAPE

T-Tape Drip Tape

One of the most recognized and trusted drip tape brands in the world, T-Tape Drip Tape is used in a variety of crops around the world to help reduce water consumption, increase crop quality, and increase crop yields. T-Tape Drip Tape can be installed on the ground, under plastic, or even subsurface. T-Tape's industry leading material strength, design, and quality production standards ensures that it's the drip tape that you can count on year after year.

Drip Tape

Generally, dripper spacings of 12" will give a continuous wetted strip. It is not necessary to have a dripper at each plant.

GARDEN DRIP IRRIGATION KIT

Rain-Flo has sold hundreds of these garden kits with very good comments. Customers call back for more kits for friends or neighbors. Drip irrigation takes less water and puts it to the crop roots, not to the weeds between the rows like a sprinkler head does. Quick and easy to install. A must for gardens. Try it -you'll like it. Smaller or larger kits can easily be made to fit your garden. Call for price.

- 6 Dripline Repair Couplings

Can Be Shipped UPS

#GK75 Complete 3/4" Kit \$145.00
 #GKP75 Kit without Drip and Head Line \$ 75.00

Note: Garden hoses will carry approx. 5-10 GPM. Gardens larger than a 1/4 acre we recommend 1" header line and 1" mainline; it will carry three times that of a garden hose. The 1" kit can be used to irrigate up to a 1/2 acre at a time. Blue stripe tubing works for this. Also, going direct to the well or pressure tank will give a better flow to the garden.

Drip Tape

Oval Hose (BLUE STRIPE)

Oval Hose is a low pressure tubing that is used for drip irrigation headlines. Smaller sizes(Round Hose) are also used as a lateral distribution and supply hose for emitters, micro-sprinklers and extension tubing. It is a linear low density polyethylene tubing resistant to stress cracking, chemicals, equipment abrasions and heat. It tolerates freezing temperatures and can be driven over.

All systems need pressure gauges!

Not using pressure gauges in the system can be very costly.

"It's like working in the dark!"

2 1/2" Liquid Filled Gauge

Gauges filled with liquid provide effective dampening of most pulsation and vibration, and provide lubrication of all moving parts.

RAIN-FLO MIXAMATIC FERTILIZER INJECTOR

THIS FERTILIZER INJECTOR WORKS AUTOMATICALLY FROM MAIN LINE PRESSURE, VERY LOW PRESSURE LOSS; 1 TO 3 PSI.

HERE IS HOW IT WORKS: By closing gate valve partly on main line, it causes a pressure differential. The 1/4" tube on the high pressure side of the valve leads through a flow meter and into the top of the fertilizer tank. With fertilizer being heavier than water, it's forced out the bottom of the tank and into the field side of the valve. Flow rates are adjusted by regulating the valve and reading the flow meter. Extra long flow tubes with valves allows for emptying water from tank before refilling. An inexpensive injector that works very well. **INCLUDES:** Tank, flow meter, back flow check valve, pressure gauge, and skid. Assembled; ready to go. Can be shipped UPS.

NOTE!!

FLOW MUST EXCEED
MINIMUM MAZZEI FLOW
RATE!!

The Mazzei injectors are simple to operate, work on water power, no moving parts, inexpensive and reliable. However, they require a drop in pressure and flow of 20%. In many cases this is not a problem and for those situations they are a fine piece of equipment.

PRESSURE REGULATORS

Pressure regulators are recommended for all drip irrigation systems. If no pressure regulators are used, high pressure surges or high pressure operations can cause damage to drip tape. Regulators should be installed close to the field being irrigated. The regulators have springs to maintain a constant pressure, these springs can be changed to change the pressure. NOTE; Flow rate on all regulators must be matched to your drip irrigation system or field size.

These pressure regulators are flow activated, water must be flowing through to make them work.

SCREEN FILTERS

These filters are used to clean water for drip irrigation systems. They clean well water, relatively clean surface water and work especially well for filtering sand out of water. They are not recommended for surface water containing algae. We recommend a pressure gauge on the filter inlet and outlet to determine when filter is clogging and to avoid unnecessary cleaning. For drip irrigation tape, mesh size should not be coarser than 120 mesh. Mesh sizes over 150 create unnecessary filter cleaning and clogging.

For optional gauges; add \$10.00 & "G" to the end of the part number below.

PLASTIC DISK FILTERS

Disk filters are designed to clean dirty water for drip irrigation systems and handle up to 3 times more dirt and debris than screen filters before cleaning is necessary. The design of the "disk" filter is a stack of disks pressed together. These disks have tiny grooves that allow clean water to pass through. To clean the filter; remove the cover, loosen the stack of disks and wash between the disks; reassemble. All filter mesh sizes are 120(125 Micron), other mesh sizes are available. If your brand or model is not listed, please call.

NOTE: If filtering sand out of water; a screen filter will work better. **For gauges; add \$10.00 & "G" to the end of the part number below.**

TRITON SAND FILTER

Clean water is a critical part of drip irrigation. When using pond or stream water, removal of algae, silt, sand and organic material from irrigation water is essential to the success of a drip irrigation system.

These economy sand filters will do the job! Built of a one piece fiberglass tank. Improper choice of media size and shape can result in poor filtration quality. Periodic back flushing of filters is necessary to remove accumulated contaminants from media bed.

STAINLESS STEEL SAND MEDIA FILTERS

Flow-Balance & Under drain Efficiency

A unique Flow-Balanced under drain is the key to Flow-Guard's impressive backwash efficiency. The Flow-Balanced under drain has multiple ports evenly distributed beneath the media bed. The corresponding flow "zones" provide a uniform lift of the entire sand bed during backwash, as well as uniform collection during filtration. Uniform lift creates a rapid liquidation of the sand bed, enabling shorter backwash cycles, less backwash disposal, and energy cost savings.

Quality stainless steel tank and manifold. Made in the USA.

SOIL MOISTURE INDICATORS

The Irrometer saves water and fertilizer!

Soil is like a sponge. Once wet, irrigating it further will neither make it hold more water, nor retain water longer. With an Irrometer, optimum irrigation cycles can be established and scheduled. This saves not only water, but all other costs of irrigation as well.

Note: For air release, one service kit is needed per one or more Irrometers.

Greenhouse Misters

Growers choose the Rivulis FLF Low Flow Fog Spray for irrigation and as a method to alter the humidity and the evaporative climate in both greenhouses and high tunnels. The FLF is so versatile that it can be used as part of a cooling system in husbandry or for irrigation in both cutting propagation and seed germination. Because of the unique vortex flow, the FLF delivers the finest droplets even at low flow rates. Team up the FLF Low Flow Fog Spray with an anti-leak valve and you've got a system with some serious control. Once the irrigation system is shut off there is no more flow through the fog spray.

MICRO SPRINKLERS

Rivulis

UPRIGHT MICRO SPRINKLER

The S2000 & AquaSmart Micro Sprinklers feature flow regulation extending the use of the sprinklers in applications with sloping fields or long lateral runs. It can be installed in combination with a plastic stake, metal stake, or hanging assembly. The range limiter reduces the diameter of spray pattern. **Applications:** Short term crops such as vegetables and long term crops such as orchards. Install 12" - 24" above crop.

XCEL WOBBLER

the wobbler
Off-center rotary-action sprinkler

Wobblers are designed for frost protection and have very uniform coverage. Wobblers installed in test beds withstood winds up to 25 MPH and temperatures as low as 28°. They are an excellent sprinkler from small diameters up to approx. 52' and 1 to 15 GPM. New Xcel has less vibration.

MINI WOBBLER

The Mini-Wobbler is an off-center rotary-action sprinkler designed for solid-set irrigation systems. Utilizing the same technology as the popular Xcel Wobbler, the Mini-Wobbler provides outstanding uniformity and an excellent distance of throw at low pressure. It produces a gentle application of water with reduced vibration. Its large diameter of coverage combined with outstanding distribution uniformity make it an ideal choice for nursery and under tree irrigation systems.

Senninger
AGRICULTURAL IRRIGATION | A Hunter Industries Company

Riser Assembly

- Outstanding uniformity and distance of throw at low pressure.
- Low angle of throw to reduce wind drift and distortion of spray pattern.
- Only one moving part for longer life than conventional rotating or spinning sprinklers.
- Constructed entirely of high-impact engineering grade thermoplastics for excellent corrosion resistance.

SUBSURFACE DRIP IRRIGATION

SDI is more than an irrigation method for row crops, it's a management tool that allows growers to apply the precise amount of water and nutrients required directly to the root zone during the plant's critical growth stages. Water and nutrients are also used more efficiently so input costs are reduced while increasing yields.

Driplines are buried 8-15" below the soil surface and spaced 30-60" apart enabling water and fertilizer to easily reach each plant's root zone. When properly maintained, a high quality drip system can last up to 20 years or more. Please call for more info or visit rivulis.com/crop/sdi/ and netafimusa.com.

IRROcloud SENSOR MONITOR

The IRROcloud® IC-10 Sensor Monitor is a cellular-enabled sensor reading solution. Data is recorded hourly from up to 10 sensors and transmitted every other hour to the IRROcloud® web application accessible from any connected device. Data displayed on IRROcloud® allows for easy interpretation of status and trends to help growers enhance irrigation water use efficiency. Easy outdoor installation with 2+ year battery life using standard C batteries.

NELSON BIG GUNS

WORLD'S NUMBER ONE GUN In the field of high volume gun type sprinklers, Nelson Big Gun is recognized as the world's leader in quality and performance. Nelson's most advanced design, the SR Series BIG GUN is available in an expanded range of sizes. So whether you plan to use it on a traveler, as a center pivot end gun, on a solid set irrigation system, for dust control or waste disposal; there's a Nelson SR Series BIG GUN to handle the job and you can be assured it is engineered and precision manufactured for heavy duty reliability and long wear life with minimum maintenance. Every Nelson BIG GUN is subjected to the toughest inspection, testing, and quality control standards in the industrial-strength individual water testing at the factory.

OROFLEX WELL HOSE

Features & Advantages:

Increased Flow Volume - Provides significant energy and cost savings versus hard pipe along with higher flow velocity. Better resistance to scaling & build up.

Easier Installation - Significantly reduces installation time & cost; no hard pipe to link together. Can be cut to specific length requirements.

NSF-61 Certified - Approved for use with potable water.

Compact Design - Lays flat so can be rolled into a tight coil for easy storage or transport.

PUMP PROBLEMS?

- 1. Check suction hose and fittings for air leaks (cracks, loose fittings).** A small pin hole can drastically reduce pump performance.
- 2. Clogged impeller.** Clean impeller, make sure correct strainer is on inlet of suction.
- 3. Discharge check valve not tight.** Replace rubber seal in check valve.
- 4. Shaft seal not tight.** Packing seal; Tighten packing. Mechanical seal; Replace broken seal.

Notice: All irrigation pumps (especially big pumps) must start pumping water slowly. Do not rev engine to full throttle until all main-lines and laterals are full of water. Water hammer has tremendous force and can blow pipes apart, including underground main-lines.

CAPRARI PTO PUMP

RUGGED TRACTOR DRIVEN CENTRIFUGAL PUMPS

Price includes pump, trailer, PTO shaft, hand primer, discharge check valve and suction fitting.

Caprari centrifugal PTO pumps are designed to suit many types of irrigation systems.

These rugged, efficient pumps are mounted on a two wheeled cart manufactured by **Rain-Flo Irrigation**, making it very easy to handle. Pumps are supplied with PTO drive shaft and fitted with priming valve, hand primer, pressure gauge and suction adapter.

A very dependable step-up gearbox is an integral part of these well proven pumps. The gearbox shaft is supported by heavy duty wide spaced bearings. The box is oil lubricated and some models are also water cooled. A dip-stick is used to check oil level. Cart construction is heavy duty tubular steel fitted with 16" diameter wheels with ball bearings. A rear stabilizer prevents the pump from tipping backwards.

BASIC DRIP IRRIGATION SYSTEM INFORMATION

Approximate Acres To Irrigate? _____
 How Many Rows? How Long? _____
 Type Of Water Source?.....Well.....River.....Pond.....City Water
 How Far Is The Water Source From the Field? _____
 Approx. how many feet of elevation from the water source to the field? _____
 If you have your own pump, how many G.P.M.? At what PSI. _____
 Need to do all of your field at one time? Or break into zones? (A small water source may determine the amount of zones)

TEST INFORMATION

Determining amount of water in a well? **1.** Check inside of your well cap. **2.** Ask your well driller. **3.** Check it yourself, put a pressure gauge and valve next to your hydrant, close the valve to approx. 30 PSI, use a 5 gal. pail or barrel and check fill time with your watch. **Note;** Your well may have a small water pump and a large amount of water, if so, a larger pump may be used. To check an engine pump, pressurize pump to approximately 50 PSI and check with barrel and your watch.

How much water do I need for my irrigation system?

See charts inside of back cover. (GPM per acre)

Standard drip tape has 12" emitter spacing and flow rate is .45 GPM per 100 ft. at 8 PSI. Can be used for rows up to 500 ft. long. For longer rows up to 1000 ft. lower flow drip tape must be used or a larger diameter drip tape. To find flow (GPM) needed for a field or zone, multiply total linear ft. of drip tape x drip tape flow rate. **Example;** total linear ft. of drip tape 12,561 ft. ÷ 100 (for the flow rate per 100 ft.) x flow rate .45 = 56.5 GPM.

PLEASE CALL FOR MORE INFORMATION

Square feet per acre = 43,560 sq. ft.

1 Acre = 208.71 ft. sq.

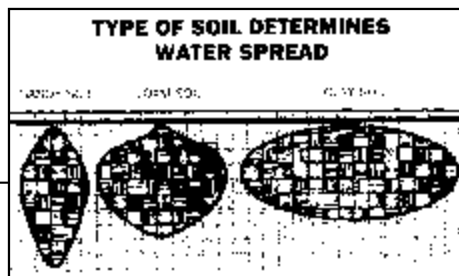

1" an Acre = 6,500-13,500 Gallons (Drip irrigation depending on row spacing)

1" an Acre = 27,154 Gallons (Overhead Irrigation)

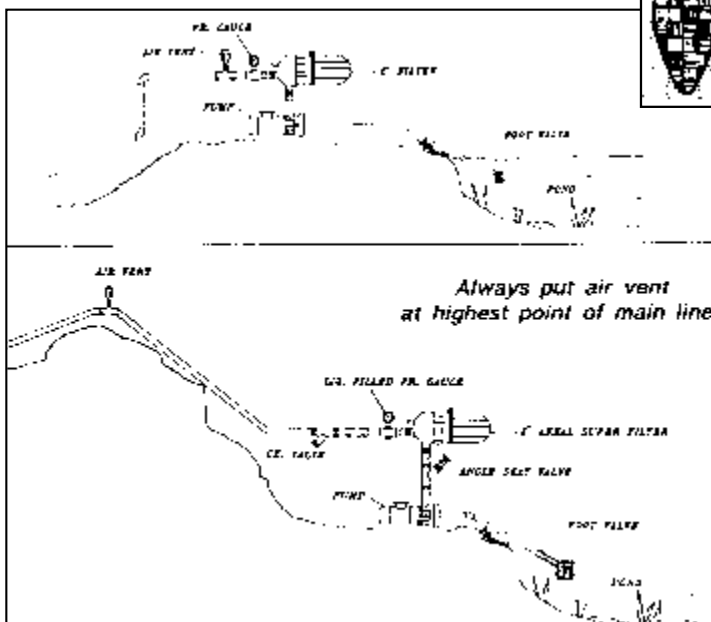

1" per hour an acre = 452.57 GPM (Overhead Irrigation)

HELPFUL TIPS

- 2.31' of gravity is needed to create 1 PSI.
- 1 Cubic foot of water equals 7.48 gallons.
- Inches per hour = .00221 x GPM flow ÷ acres.
- 3.8 Liter = 1 Gallon

TYPICAL DRIP SYSTEM LAYOUTS

HANDY ELEVATION SCALE. CAN ALSO BE USED FOR WELL DEPTH!.

SURFACE WATER CHLORINATION

For best results; if using surface water, you should chlorinate your system every two weeks. Inject approximately ½ Gal. chlorine bleach per acre. Run system about 20 minutes then let set for ½ day before irrigating again.

HAVING TROUBLE GETTING THE HOSE OVER FITTINGS?

TRY THIS...

1. Make two slits approximately 1" apart and 1" long, on each side of the hose end.
2. Lubricate the inside of the hose and the outside of the fitting and set it upright on ground.
3. Using two vise grips; clamp on the "flaps" and wobble the hose back and forth over the fitting as shown at right.
